

# Multiple Qubit Quantum States

Marcio Woitek

## Problem 1

$$\begin{aligned} \triangleright & \frac{1}{\sqrt{2}} |0\rangle \otimes |1\rangle - \frac{1}{\sqrt{2}} |1\rangle \otimes |1\rangle \\ \triangleright & \frac{1}{\sqrt{2}} |01\rangle - \frac{1}{\sqrt{2}} |11\rangle \end{aligned}$$

## Problem 2

**Answer:** The superposition collapses to one of the pure states  $|00\rangle, |01\rangle, |10\rangle$  with equal probability  $\frac{1}{3}$ .

## Problem 3

**Answer:** After measurement, the first qubit will be in state  $|0\rangle$  whereas the second qubit will be in the state  $\frac{1}{\sqrt{2}}(|0\rangle + |1\rangle)$ .

## Problem 4

**Answer:** After measurement, the first qubit will be in state  $|1\rangle$  whereas the second qubit will be in the state  $|0\rangle$ .

## Problem 5

$$\begin{aligned} \triangleright & \frac{1}{\sqrt{2}}(|00\rangle + |11\rangle) \\ \triangleright & \frac{1}{\sqrt{2}}(|000\rangle + |111\rangle) \\ \triangleright & \frac{1}{\sqrt{3}}(|00\rangle + |01\rangle + |11\rangle) \end{aligned}$$
